Attachments:	file_3MB.pdf, Mime.822

"Terence, this is stupid stuff:

You eat your victuals fast enough;

There can't be much amiss, 'tis clear,

To see the rate you drink your beer.

But oh, good Lord, the verse you make,

It gives a chap the belly-ache.

The cow, the old cow, she is dead;

It sleeps well the horned head:

We poor lads, 'tis our turn now

To hear such tunes as killed the cow.

Pretty friendship 'tis to rhyme

Your friends to death before their time.

Moping, melancholy mad:

Come, pipe a tune to dance to, lad."

-- A. E. Housman

How to...

1. Create rule for outlook client when sending emails through Mailbomber

The messages are delivered by Mailbomber can be automatically distributed into different folders for an account in outlook. This is archived by creating new rules in outlook for this specific account.

Tools -> Rules and Alerts -> New Rule

Follow the "Rule Wizard"

· Select "Move messages with specific words in the subject to a folder"

· Provide a key word, eg., "draft" for "specific words"

· Choose the destination folder, e.g., "Drafts" for the message's subject including "draft" in the above step

· Click "Next" button upon completion

As a result, any messages with their subjects containing the word "draft" will be delivered into "Drafts" folder of recipients.

2. Outlook addin deployment

Outlook addin deployment is part of M+IIS in the current build 2009.1.0.80. All necessary files for deployment at exchange server 2k3/2k7 will be installed in "C:\IISExt\WebContent?" folder. Brief setup steps are as follows

· Deploy organizational form library (one-time)

· Deploy forms (one-time) by double clicking MAExchange.vbs from the installation folder on exchange server

· Run stubbing job for an account on a client machine with Outlook 2k3/2k7 installed

· Launch Outlook 2k3/2k7 and open stubbed message to trigger outlook addin installation process for the first time

· Restart Outlook 2k3/2k7 to view resolved stubbed messages

3. Enable journaling on exchange server

Enable Journaling on Exchange

· Exchange Server Library

· Exchange server 2003

o How to Enable Standard Journaling

o Enable Envelope Journaling in Exchange 2003

§ Envelope journaling is available in Exchange 2000 + SP3 and Exchange 2003 + SP1 and later.

§ Use the ADSI editor management console.

§ Use the Exchange Server Email Journaling Advanced Configuration (exejcfg.exe) tool.

o Troubleshooting message journaling in Exchange Server 2003 and in Exchange 2000 Server

· Exchange server 2007

o Overview of Journaling

o Exchange Management Shell

o Exchange 2007 Transport Journaling

o Enable journaling at Exchange Server 2007 for M+Archive

§ Launch Exchange Management Console

§ Start -> Microsoft Exchange Server 2007 -> Exchange Management Console

§ Create a normal account as "journal1" at exchange server 2007 by click "New Mailbox". You will find "@user" is attached at the end of this account after SyncAB is run.

§ Recipient Configuration -> Mailbox

§ Rule-based journaling by creating a new journal rule and add "journal1" account to journal messages for recipient, e.g., Administrator. However, this is not the one we currently support because "@user" is attached at the end of this account after SyncAB is run.

§ Organization Configuration -> Hub Transport -> Journaling tab

§ Mailstore-based journaling by enabling "journal1" as "Journal Recipient" for the selected mailstore. This is one we support now. The "@journal" is attached at the end of this account after SyncAB is run.

§ Server Configuration -> Mailbox -> General tab from "Properties" of Mailbox Database (First Storage Group)

4. Install/Uninstall M+IIS on exchange server

· Installation:

o Double-click setup.exe from M+IISExt folder in the build

o Configure parameters for Jexcon and Remote Provider

o Configure parameters for Exchange server and Active directory

o Post-installation check lists

§ Launch Internet Information Services (IIS) Manager

§ ISAPI_Stubbing.dll and ISAPI_AWA.dll are registered and running in "ISAPI Filters" tab for "Default web site"

§ "ewv" web site is listed in Default web site in IIS manager

§ "ewv" and "exchange" web sites (and "owa" web site for exchange server 2k7) are in same ApplicationPool?

§ "ewv" authentication is anonymous enabled

§ MAISAPI.dll is added in "Handler mappings" tab for "ewv" web site

§ Integrated Windows authentication is unchecked in "Authentication Methods" for "exchange" web site. Otherwise, OWA stubbing log will report 401 error

· Un-installation

o Remove M+IIS from "Control Panel"

o Manually delete the installation folder "C:\IISExt"

5. Setup MySQL database for M+Archive?

· Download and install MySQL free community server 5.1 and GUI tool

· Download and install MySQL ODBC 3.51 driver or MySQL ODBC 5.1 driver

· Create maopen database and MySQL connection string examples

o Open dos shell and manually run

o C:\"C:\Program Files\Messaging Architects\SQL\gwopenDbCreator.exe" "Driver={MySQL ODBC 3.51
Driver};Server=localhost;Port=3306;Database=maopen;User=root;Password=password;Option=3;
" MYSQL maopen

o Trying to connect with: driver={mysql odbc 3.51 driver};server=localhost;port=33

o 06;user=root;password=password;option=3;

o Checking if Database exists...

o Database already exists...

o Creating Tables....

o Disconnecting..

o Created by M+Archive installshield

· Login MySQL Administrator and check maopen database and its tables

6. Setup Microsoft SQL Express 2005 database (free edition) for M+Archive?

· Download and install SQL Server Express 2005

· SQL Server Express 2005 connection string examples

· Configure SQL Express 2005

o Open SQL Server Configuration Manager

§ Go to "SQL Server 2005 Network Configuration -> Protocols for SQLEXPRESS" and enable
"Named Pipes" and "TCP/IP"

o login Microsoft SQL Express Management Studio Express

§ Go to "SRV161NET24\SQLEXPRESS (SQL Server 9.0 - YELLOW\Administrator) -> Properties -
> Security" and enable "SQL Server and Windows Authentication mode"

§ Go to "Security -> sa -> Properties -> General" enable "SQL Server authentication" and provide a password for it

§ Go to "Security -> sa -> Properties -> Status" enable "Login"

· Open dos shell and run

· C:\Program Files\Messaging Architects\SQL>gwopenDbCreator.exe "Driver={SQL Native Client};Server=.\sqlexpress;Database=maopen;Uid=sa;Pwd=123Password;" MSSQL maopen

· Login Microsoft SQL Express Management Studio Express again and check database "maopen"

7. How to create ssl key with JDK keytool for Jexcon?

As we know, Jexcon is merged into Remote Provider since build 2009.2.0.173. So there is no standalone Jexcon installer and Jexcon is also no longer part of M+Archive installation. To support ssl-enable Jexcon, ssl key has to be manually created. First make sure that jdk is installed on the box where the key will be created, for example, "C:\Program Files\Java\jdk1.6.0_13". The steps of ssl key creation are described in this link. Brief steps are summarized in the following.

· Open dos shell

· Run "cd C:\Program Files\Java\jdk1.6.0_13\bin" if jdk1.6 is installed

· Run "keytool -keystore "C:\Program Files\Messaging Architects\RemoteProvider?\keystore" -alias jetty -genkey -keyalg RSA"

· Provide information about certificate and passwords in the prompts. Make sure

o Provide "localhost" for question "What is you first and last name?"

o Provide "password" for questions of "Enter keystore password:" and "Enter key password for <jetty>"

Once the above steps are completed, a keystore file will be successfully created at ~/RemoteProvider folder. Next we need to manually modify jetty-ssl.xml to point to keystore.

<Set name="keystore">C:\Program Files\Messaging Architects\RemoteProvider\keystore</Set>

<Set name="password">password</Set>

<Set name="keyPassword">password</Set>

<Set name="truststore">C:\Program Files\Messaging Architects\RemoteProvider\keystore</Set>

At this point, it is time to start Remoteprovider service that includes Jexcon.

8.How to Allow Mailbox Access in Exchange 2007 ?

Applies to: Exchange Server 2007 SP2, Exchange Server 2007 SP1, Exchange Server 2007

This topic explains how to use the Exchange Management Shell to grant the Full Access permission for a mailbox or the Receive As permission for a mailbox database.

When you grant a user the Full Access permission to a mailbox, that user has full access to only the mailbox for which the permissions are applied. With the Full Access permission, the user can open and read the contents of the mailbox. However, the user cannot send as that mailbox without additional permissions. For information about granting the Send As permission, see How to Grant the Send As Permission for a Mailbox.

When you grant a user Receive As permission to a mailbox database, that user can log on to all mailboxes within that database, but is not able to send e-mail messages from those mailboxes. Also, if you grant Receive As permission at the storage group level, the specified user can log on to all mailboxes within all databases in the storage group. For example, you may want to grant access to the mailbox database for mobile access or for legal review.

Full Access or Receive As permissions are not granted until the Microsoft Exchange Information Store service caches the permissions and updates the cache. To grant the permissions immediately, stop and then restart the Microsoft Exchange Information Store service.

Before You Begin

To perform this procedure, the account you use must be delegated the following:

· Exchange Organization Administrator role

For more information about permissions, delegating roles, and the rights that are required to administer Microsoft Exchange Server 2007, see Permission Considerations.

8.1 To use the Exchange Management Console to grant the Full Access permission for a mailbox

1. Start the Exchange Management Console.

2. In the console tree, click Recipient Configuration.

3. In the result pane, select the mailbox for which you want to grant the Full Access permission.

4. In the action pane, under the mailbox name, click Manage Full Access Permission. The Manage Full Access Permission wizard opens.

5. On the Manage Full Access Permission page, click Add.

6. In Select User or Group, select the user to which you want to grant the Full Access permission, and then click OK.

7. Click Manage.

8. On the Completion page, the Summary states whether the Full Access permission was successfully granted. The summary also displays the Exchange Management Shell command that was used to grant the Full Access permission.

9. Click Finish.

8.2 To use the Exchange Management Shell to grant the Full Access permission for a mailbox : Run the following command to add the Full Access permission directly to the mailbox.

à> Add-MailboxPermission "Mailbox" -User "Trusted User" -AccessRights FullAccess

8.3 To use the Exchange Management Shell to grant the Receive As permission for a mailbox database

Run the following command to add the Receive As permission to the mailbox database.

à>Add-ADPermission -Identity "Mailbox Store" -User "Trusted User" -ExtendedRights Receive-As

Exchange 2007 RTM

8.4 To use the Exchange Management Shell to grant the Full Access permission for a mailbox

Run the following command to add the Full Access permission directly to the mailbox.

à>Add-MailboxPermission "Mailbox" -User "Trusted User" -AccessRights FullAccess

8.5 To use the Exchange Management Shell to grant the Receive As permission for a mailbox database

Run the following command to add the Receive As permission to the mailbox database.

à>Add-ADPermission -Identity "Mailbox Store" -User "Trusted User" -ExtendedRights Receive-As
